一、Download method:

Scan QR code

Should be downloaded from the store

Domestic IOS users can search the app store for "smart lamp Pro" to download.

Foreign users can search "lampsmart Pro" in the app store or Google play to download.

二、Software introduction

Smart lamp Pro Android platform mobile phone software is a software that controls smart lamps through mobile phone Bluetooth. The software can control the lighting and brightness of lamps, which greatly improves people's use of lamps. The software can also

learn the configuration of other users and share their own configuration, and realize different mobile phones to control the same device.

三、Functions and pages

一、Add device

The first time you enter the home page, there is no device. You need to add a device before you can enter the device control page. The home page interface without adding devices is shown in Figure 1.

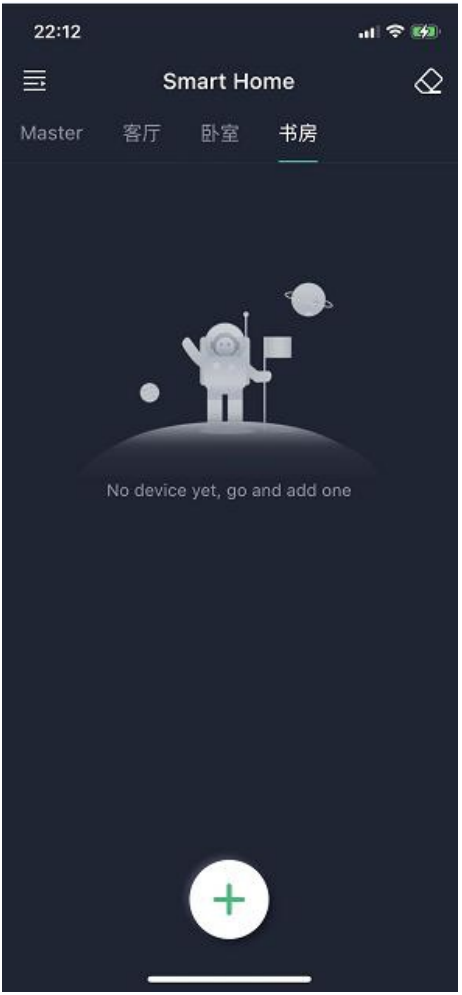

Figure 1

Click the plus sign at the bottom of the page to enter the add device page, as shown in Figure 2.

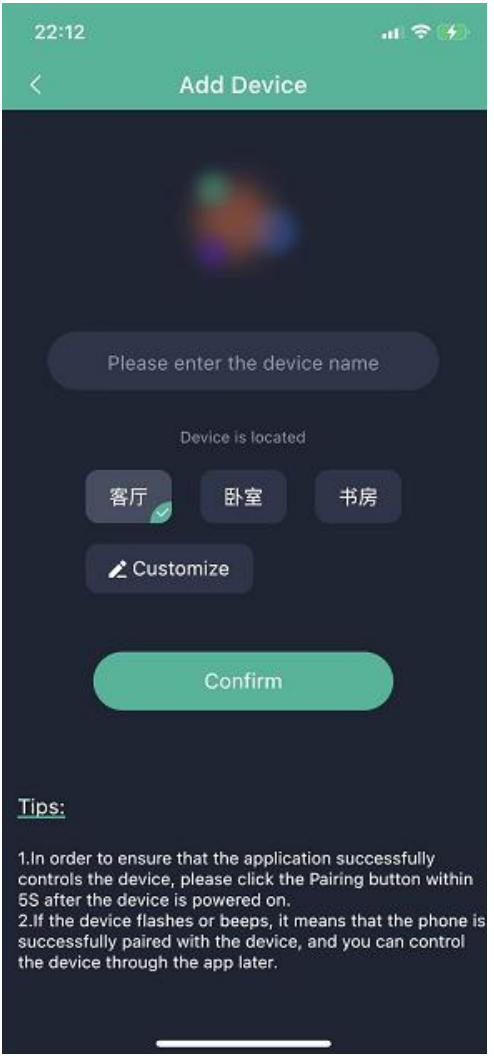

Figure 2

Enter the name of the added device and click OK to return to the home page. At this time, the home page will display the newly added device. At this time, the home page is shown in Figure 3.

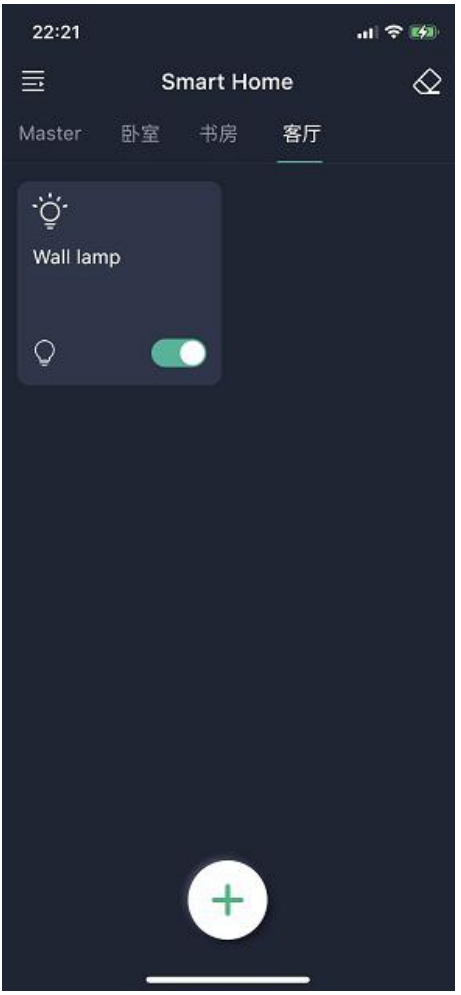

Figure 3

1、Open the device control page

Click the newly added equipment card to enter the equipment control page.

2、Light switch

There is a switch button on the equipment card, which can control the light on and off.

3、Room and general control

There will be three rooms by default, namely the living room, bedroom and study. When adding equipment, you can choose to add the equipment to the fixed room, and the general control can control the equipment in all rooms.

4、Code clearing

The icon in the upper right corner of the home page is the code clearing button. Click it within 5 seconds after the device is powered on to cancel the pairing relationship between the device and the mobile phone, and the subsequent mobile phones cannot control the device.

5、Open the menu page

Click the icon in the upper left corner of the home page to open the menu page.

二、Equipment control

After clicking the equipment card on the home page, you will enter the equipment control page, which can adjust the brightness, color temperature and light switching function of the lamp. The equipment control interface is shown in Figure 4.

Figure 4

1、 Color temperature adjustment

There is a white disc on the page. Sliding the disc left and right can adjust the color temperature of the lamp. Sliding to the left will make the light color more yellow, and sliding to the right will make the light color more white.

2、Brightness adjustment

There is a green sliding bar under the color temperature adjustment disc. Sliding to the left will darken the brightness of the lamp and sliding to the right will brighten the brightness of the lamp.

3、White light

Below the brightness adjustment is the function button area. The first one with "W" character is the white light button. After clicking, the light color will change to white light, and the brightness is the maximum brightness.

4、Yellow light

The yellow light button is on the right of the white light button. After clicking, the light color will change to yellow, and the brightness is the maximum brightness.

5、Neutral light

The neutral light button is on the right of the yellow light button. After clicking, the light color will change to light yellow, and the brightness is the maximum brightness.

6、Night light

The night light button is on the right of the neutral light button. After clicking, the light color will change to light yellow, and the brightness is only 10% of the maximum brightness.

7、Auxiliary light switch

Below the white light button is the auxiliary light switch button, which can be clicked to control the switch of the auxiliary light.

8、Timing

The button on the right of the auxiliary light switch is the timing button. After clicking, you can select the time to turn off the light regularly.

9、Color light cycle switch

On the right side of the timing button is the color lamp cycle switch button. After clicking, you can control the on and off of the color lamp cycle.

10、Pairing

The matching button is on the right of the color lamp cycle switch button. After the lamp is powered on, click the matching button within 5 seconds to match. After the matching is successful, the lamp will flash light and dark to indicate that the matching is successful. After

the matching is successful, the lamp can be controlled through app.

11、Light switch

The switch at the bottom of the page is a light switch. Click it to turn on or off the light.

12、Voice control

The button on the right of the light switch is a voice control button. After clicking, you can control the light switch and brightness by saying fixed voice commands.

三、Menu selection

The menu page mainly has the functions of language, scan, my QR code, room management, instructions, check and update and problem feedback. The specific page is shown in Figure 5.

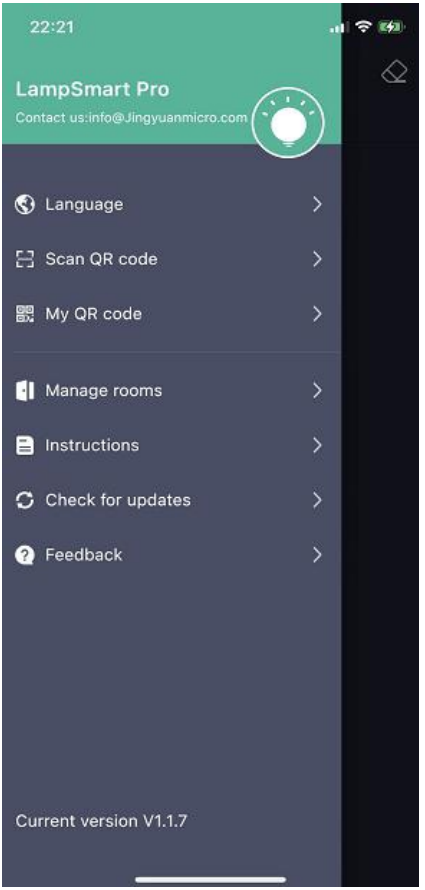

Figure 5

1、Language

After selecting a language, a language selection box will pop up. You can switch the applied language according to the language selection box. At present, Chinese, English, Russian and Japanese are supported.

2、Sweep

Click Scan to open the code scanning page of the application. At this time, you can scan the QR code of other users' device information to learn others' device information. After learning, you can control others' devices through your mobile phone without code matching.

3、 My QR code

After clicking my QR code, all the device information of this machine will be displayed in the form of QR code. Other mobile phones can learn all the device information of this machine through the scan function.

4、Room management

Click room management to enter the room management page, where you can add rooms, delete rooms and modify room names.

5、Instructions

Click to view the application instructions.

6、 Check for updates

After clicking check update, it will judge whether the current software is the latest version. If it is the latest version, a prompt box will prompt the user to update. If there is no latest version, it will indicate that it is the latest version.

7、Problem feedback

Clicking the problem feedback will open the mobile phone mailbox, and the user can explain the suggestions or exceptions of the application. After clicking send, the information will be sent to the mailbox of the management personnel, and the management personnel will deal with the problem centrally after receiving it.
